

Multimedia Holdings Corporation
KNAZ-TV, Flagstaff, Arizona
Reduced Power STA Request

EXHIBIT A

On behalf of Multimedia Holdings Corporation ("Multimedia"), licensee of TV television station KNAZ-TV, Flagstaff, Arizona (Facility ID #24749), hereby files an application for Special Temporary Authority (STA) to operate at Fifty Percent (50%) of authorized power. KNAZ has been operating at such reduced power since April 19, 2008, and Multimedia notified the FCC by letter dated April 23, 2008. The reduced power operation was caused antenna and feedline damage caused by three successive ice storms.

Due to high VSWR following multiple winter storms with heavy icing conditions, KNAZ engaged Wallen Communications to electrically test and physically inspect the KNAZ analog channel 2 antenna and feed-line. High VSWR was first noted about April 12, 2008 and continued to increase until full power operation is longer possible as of April 19, 2008. The results of testing and inspection by Wallen Communications indicated extensive repairs would be necessary, such as welding an eight-inch long crack in the antenna mast; preparation, prime and painting of batwing mast; rebuilding feed-line with inner elements, bullets, o-rings, etcetera; installation of new de-icing heater cables from junction boxes to antenna; rebuild junction boxes (sent out to third party); installation of new heaters in 20 batwings, new spring hangers, new rigid hangers as needed, new channel 2 antenna harness and new single line feed input to antenna.

Multimedia is evaluating whether to install a new standby antenna or a replacement standby antenna. In the event of use of a replacement antenna, a structural analysis of the tower will be required before installation of a permanent standby antenna. Delivery lead-time of a new antenna and research regarding the impact of antenna change on current DTV post-transition construction permit are being evaluated.

Multimedia will inform the FCC when full power is restored.
